FOR IMMEDIATE RELEASE – November 2010

With all the recent power outages ... How do we stay warm and cozy?

One answer is to transform an ordinary, heat-stealing open fireplace into an Insert, which is a highly efficient, natural heating source that also serves as a focal gathering place for family and friends.

An Insert offers both radiant and natural convection heat – something you cannot get with an open hearth. It has a large full-sized firebox so there is plenty of room for standard length logs. A fireplace insert is easily installed in the open hearth and can be adapted to fit any existing space in the wall. There are also optional matching steel surrounds available in a variety of sizes.

Higher fuel efficiency, higher combustion temperatures, and lower atmospheric emissions make burning wood in an Insert a “green” thing and an environmentally responsible addition to your home. Again, no electricity is required. Contact Wittus for more info on the H530.
