A Tall Order...

Discover a powerful source of fire with the Cosmo 1500, a stove that celebrates fine Danish design and stands tall and elegant next to ten existing Cosmo models. This stove, crafted by Jydepejsen of Denmark is a combination of sleek style and fire efficiency that offers an inspiring focal point to every room it inhabits.

The tall version includes these features: a sizeable firebox that measures 15" w x 13" d x 17" h; a cool handle conveniently positioned below and away from the firebox; a sleek cast iron top & door that retains heat; a large, curved tempered glass viewing window with a built in air wash system that keeps the window clean and clear; a locking system with a uniquely hidden "finger top" control wheel; an ash drawer cleverly tucked behind the door; and a steel door at the bottom which opens to reveal a compartment for wood storage. In addition, the Cosmo 1500 model offers a unique optional feature: a set of four heat memory soapstone blocks that can be placed in the top of the stove for improved convection and heat management. The body of the Cosmo 1500 is available in black or gray steel with top or rear venting.

A fireplace favorite for every home configuration, fine interiors flourish with the addition of "warm furnishings" like the Wittus Cosmo collection. These stoves are specifically designed to burn purely and efficiently at 81%, with a DuplicAir system for controlled stove lighting and combustion and a cleaner burning system and hotter fire with very little ash. Long and lean, the Cosmo 1500 is a polished "super model" in a stylish collection of fine fireplaces.
