Design

Using ergonomic intelligence and pace-setting style savvy, the Romotop designer Vlastislav Vyborny fast-forwards traditional ceramic hearths into aesthetic technology products of the 21st century.

Sleek, sexy curves, advanced engineering, and flawless performance are the essence of these wood burning fireplaces. Romotop approaches design the same way European auto makers approach high-performance sports cars.

Technology

A dedicated assembly facility at the Czech manufacturing plant transforms the inspired designs into high-performance hearths for the contemporary home. Only top quality materials are utilized with versatile and sophisticated functionality, including: 3-point locking systems, tempered torsion springs and silent counterweight mechanisms for vertically sliding glass doors.

Tested to Washington State fireplace standards, and listed to UL 1482 in the US and ULC S627 in Canada, they are highly efficient and clean-burning.

Stromboli — Rotating Around

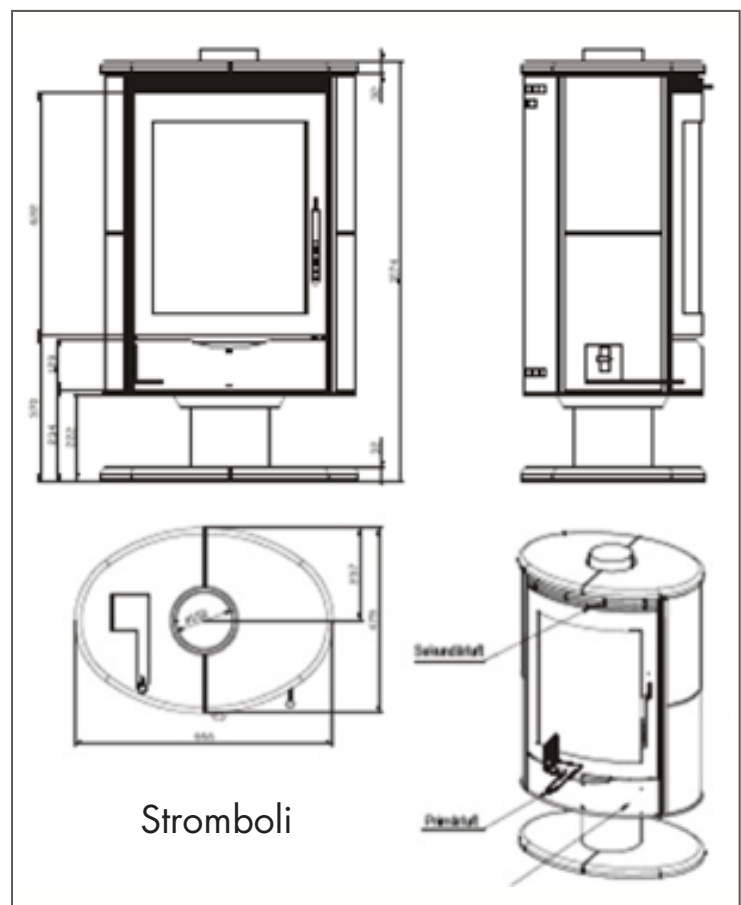

The oval Stromboli (shown at top right) floats on a pedestal and may be turned up to 360° so the panorama of flames can be enjoyed anywhere in the room. With the glass window over 16" wide and nearly 20" high, the viewing area is one of the largest and combined with an effective air-wash system, it insures that the glass always stays clean.

It measures 42" high x 26" wide x 19" deep and weighs 385 pounds. Top vent only. The Stromboli comes in gray steel.

Cladding options include steel, ceramic tile, or natural stone. The Stromboli heats up to 38,000 BTUs; about 1,600 square feet.
