Spring Happenings

Spring is the perfect time to visit the Wittus showroom at 40 Westchester Avenue in Pound Ridge, NY. We have re-vamped our showroom and have some new products on view. Come and see the new Spartherm Arte 3RL three sided zero clearance built-in, the Cosmo 1147 in soapstone, the Cosmo Pedestal, the Shaker stove and much more. Or visit our website www.wittus.com.

Good Time Grill Recipe

There's nothing like a great recipe to get your grilling season off to a bang. Here's one of our favorites prepared on the Wittus Phoenix grill.

Grill Roasted Lamb Sausage

Ingredients:

Lamb Sausage of your choice

2Tbs. Olive Oil

1 tsp. Thyme

1 tsp. Rosemary

Salt & Pepper to taste

Prepare the grill ahead of time. Start a fire using bunched paper, kindling and wood. Once the fire is roaring, let the fire burn down until you have glowing embers but no flames. Place the grill rack over the coals to heat it up. Toss the lamb sausage with the olive oil, herbs, salt and pepper to taste. Place the sausage over the embers and cook until nicely charred on the outside and firm when prodded.

Wet Wood is a Waste

Burning wet wood will not get you far when it comes to making a fire. Knowing how to prepare your wood is the best way to make the most of your wood pile. Here are four easy steps that will yield positive results. More info: www.epa.gov/burnwise.com. Wittus wood stocker shown here.

- 1) Split dry wood into large wedges & small pieces for kindling.
- 2) Stack wood split side down, away from buildings and off of the ground, you can use planks as a base.
- 3) Cover the stack to protect from moisture. Keep cover raised off wood pile and sides open for air flow.
- 4) Store soft wood for 6 months and hard wood for 12 months. Properly dried wood is lighter and sounds hollow when tapped on.

Stove News

One Stop Shopping with Style

"Burning wet wood is a waste of energy. Wood burns most efficiently when the moisture content is between 15%-20%. When a live tree is cut the moisture content can be greater than 50%. Too much water in the wood reduces the temperature in the stove preventing the wood from completely burning. Incomplete combustion results in smoke going up the chimney and creates creosote. The smoke can also negatively impact your air quality inside and outside the home.

~Burn Wise

Cubic Wood Burning Stove

The Cubic series, designed by Danish architect Anders Nørgaard, is minimal and sophisticated. All 5 models utilize the same highly efficient fire box and are EPA certified and UL / ULC approved. Available styles include the Cubic 109, Cubic 166, Cubic 215, Cubic W200 and Cubic Wall models. See the Cubic 109 on the Wittus sale page, special price available through May 2019

Cosmo Wood Burning Stove

Stylish and solid, the Cosmo series includes eleven distinct models (see website for all style variations). Outstanding design features include the "cool handle" concept which positions the handle below and away from the firebox, a large tempered glass viewing window with an air wash system that keeps the glass clean, and a finger tip control wheel for air control. Cosmo 1500 shown here available with four soapstone bricks that are concealed in the top portion of the body.

Stock Wood in Style

Wood stacking can be stylish with the corten steel Woodbee wood stocker from Harrie Leenders of The Netherlands. Hexagonal shaped units can be joined to provide a creative way to stack wood. See our website to view the full product line of accessories.
